

## ASSIGNMENT-4

Write code and connections in wokwi for the ultrasonic sensor. Whenever the distance is less than 100 cms send an "alert" to the IBM cloud and display in the device recent events.

### CODE:

```
#include <WiFi.h>
#include <WiFiClient.h>

//define sound speed in cm/uS
#define Speed 0.034
#define cm_to_inch 0.393701

## OUTPUT:

S

The screenshot displays the IBM Watson IoT Platform interface. The top navigation bar includes tabs for 'Service Details - IBM Cloud' and 'New ESP32 Project - Wokwi'. The main content area shows a list of devices. One device, 'ultrasonicsensor', is selected and its details are expanded. The 'Recent Events' tab is active, showing a stream of data events. The events table has columns for Event, Value, Format, and Last Received. The data shows distance measurements in centimeters. At the bottom right, there is a watermark for 'Activate Windows'.

Event	Value	Format	Last Received
